

HAVE HEALTHY, CLEAR NAILS AGAIN

The World's First Non-thermal Laser to Target Toenail Fungus

The Erchonia non-thermal Lunula Laser is an effective tool for treating onychomycosis (toenail fungus). Research proved the Lunula Laser significantly increased clear nails over a (6) month period. The Lunula Laser targets the fungus and stimulates new clear nail growth. This patented red and violet visionary laser delivers an innovative, multifaceted approach of low level laser therapy in the form of 2 different wavelengths to the affected area. Likened unto the agnostic effect of a drug, the Lunula uses photonic energy to modulate cellular reactions that target the fungus, without any adverse reactions to the nail bed, toe or foot.
