HOW DOES IT WORK?

EMERALD™ – Is a non-invasive low-level laser that emits (10) 532 nm green lasers onto the skin to target fat cells to release the excess fatty materials inside. The materials then go into the space between your cells. From there, the fatty materials are passed through the body during its natural course of detoxification through the lymphatic system.

The treatment is straight forward with no side-effects. Your Emerald provider will have you lie on a table for approx. 30 minutes, while 10 lasers are applied to the target areas of fat simultaneously. by undergoing this treatment as few as 8 times you can see dramatic fat loss results.
