Say goodbye to plantar fasciitis pain
and hello to the **FX Series**.

ERCHONIA
World Leaders in Low Level Laser Technology

Get fast, lasting relief from the pain of plantar fasciitis

Discover the fast, painless way to relieve the pain and inflammation of the heel associated with plantar fasciitis.

The FX series provides individuals experiencing chronic heel pain with a non-invasive, efficacious solution to quickly improve their walking comfort and quality of life without surgery. While other lasers may claim to treat this problem, only the FX Series has been market cleared by the FDA to treat plantar fasciitis.

The healing powers of this low level laser technology can reduce inflammation and eliminate pain in the plantar fascia in only a matter of weeks and return you to an active life once again.

Ask if the FX Series is right for you

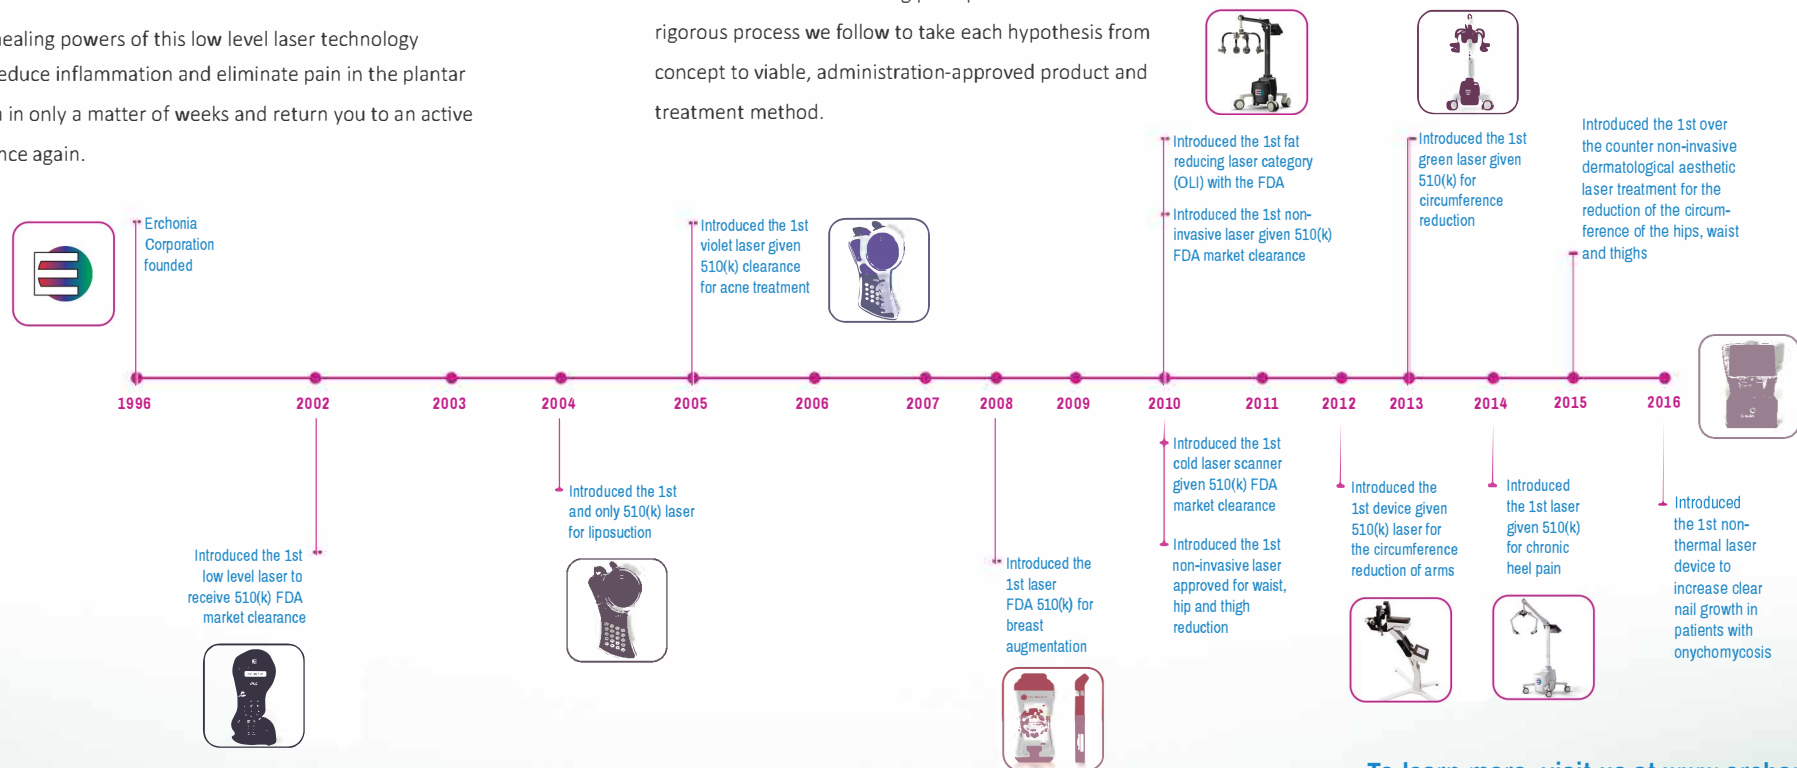

The FX Series offers unique laser that work together to relieve pain and reduce inflammation. You just lie back, relax and let the FX do the rest. Your pain could be gone in just weeks. Ask your doctor if FX is right for you.

The Erchonia Story

Erchonia was founded in 1996. Our commitment to the advancement of Low Level Laser Therapy (3LT®) through clinical research has transformed Erchonia into a world leader in the field of healing 3LT technology. The integrity, quality and commitment to our founding principles are evident in the rigorous process we follow to take each hypothesis from concept to viable, administration-approved product and treatment method.

“ My chronic heel pain forced me to stop running and was causing pain at the end of my work day. After giving many of the standard treatments a fair trial, I was ready to opt for surgery until I heard about a new device that was proven to help with plantar fasciitis pain. Initially I was skeptical, but was really opposed to surgery so I gave the laser treatment a shot as a last option. After just a few treatments I was able to resume my exercise routine without soreness and haven't had to take any medications since to control the pain.”

— Mark R.
