Bone Fractures & Healing

Hip Dysplasia

Degenerative Conditions

Post-Operative Healing

+ MORE

HOW IT WORKS

Erchonia lasers use specific wavelengths of visible light to stimulate cellular activity and accelerate the body's natural healing processes.

VISIBLE LIGHT

Photons of light penetrate the tissue, reaching injured cells without the need for invasive procedures.

STIMULATION OF MITOCHONDRIA

Laser energy activates the mitochondria—the powerhouse of the cell.

INCREASED ATP PRODUCTION

Boosts the production of ATP (adenosine triphosphate), enhancing cellular metabolism.

NATURAL HEALING & RECOVERY

Accelerates tissue repair, reduces pain and inflammation, and restores function.

ABOUT ERCHONIA

Erchonia is the world leader in low-level laser technology, pioneering advancements in health and wellness with over 21 FDA market clearances. Erchonia lasers are the **most researched and clinically proven** in the industry, with no reported side effects. As the first company in history to secure FDA clearance for non-invasive pain lasers, Erchonia continues to set the standard for innovative, effective, and safe laser therapy solutions.
