

NO TRICKS. JUST RELIEF.

HOW IT WORKS

Erchonia low-level lasers use visible light to stimulate the mitochondria, the part of the cell responsible for producing energy.

More cellular energy (ATP) helps support:

- Faster recovery
- Reduced inflammation and pain
- Quicker return to function
- Better healing support

This non-thermal treatment works by triggering a photochemical response in the body — without heat, pain, or downtime.

QUICK BENEFITS

Non-Invasive

Non-Thermal

Comfortable

No Downtime

DON'T LET PAIN HAUNT YOU.
